

KwaZulu-Natal

Economic Overview

"Leading consensus in promoting growth and broad based socio-economic participation in KwaZulu-Natal"

October 2016

Disclaimer

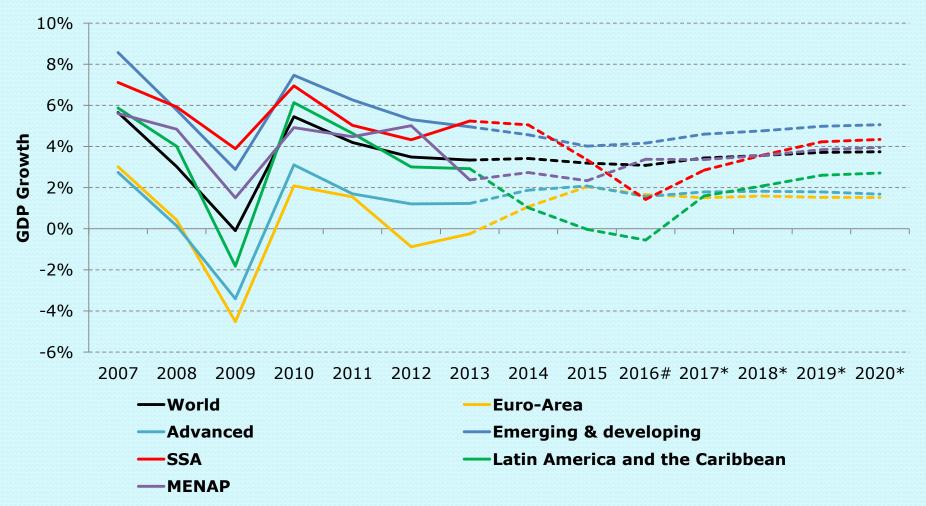

Some of the information and views presented here is not necessarily the view of the Department.

Risks Facing Provincial Economy

- Slowdown in China's economic growth- trade will diminish
- Brexit- UK leaving European Union
- Steep depreciation of the Exchange rate (volatility)
- Low global commodity prices
- Fiscal pressure and increasing costs associated to rising debt
- SA's revenue collections are running way behind budgets
- Credit rating sitting just above "junk status"
- Introduction of Political-economic risks and influence
- Sluggish Provincial economic growth
- High unemployment and poverty
- Low Education Attainment- "No fees" unrest
- Declining trend in manufacturing (need for re-industrialisation)
- Backlog in infrastructure and bulk service requirements
- Severe Drought conditions
- Stagflation makes monetary policy difficult
- IMF expects SA's economic grow to expand by 0.1% in 2016 and 0.8% in 2017
- Sentiment, business and consumer confidence levels are low

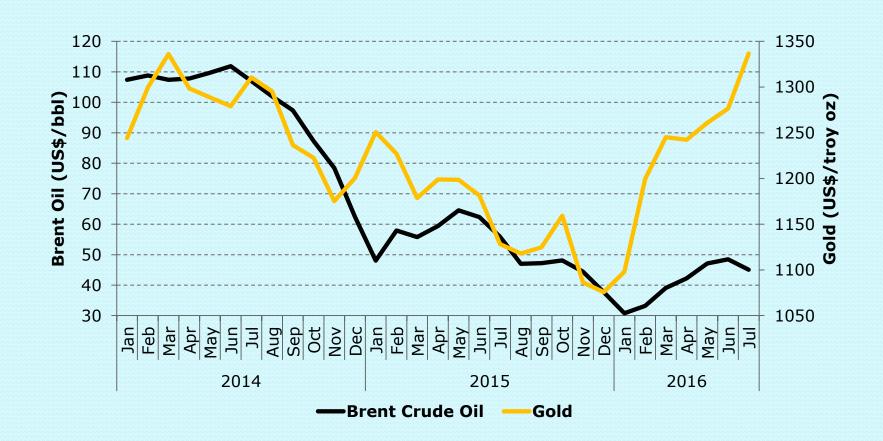

Global Growth

- Global Growth is expected to be 3.1% for 2016 and 3.4% for 2017
- Sub-Saharan Africa (SSA) is expected to expand by 1.6% while emerging and developing economies by 4.1% in 2016.
- South Africa is expected to grow by 0.1% and 0.8% for 2016 and 2017 respectively.

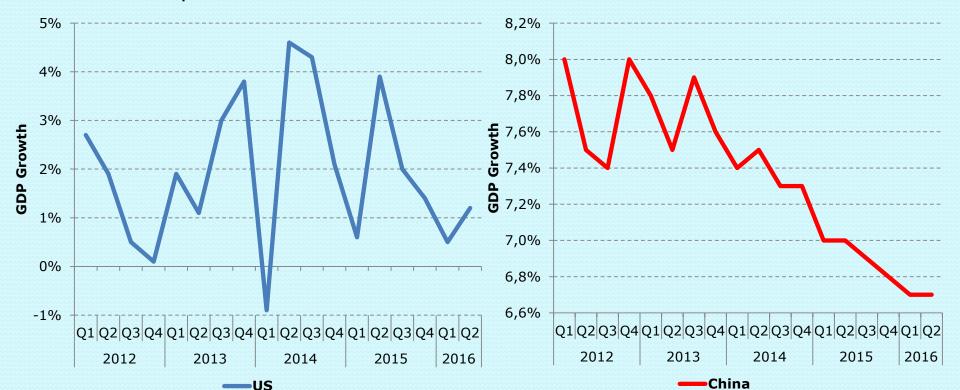

Commodity Prices

- We have no control over the global commodity cycle and are price-takers, not -setters.
- General Low Commodity prices have negatively affected commodity export-orientated economies.
- Slower economic growth in China, the largest consumer of raw materials, is dampening demand for commodities.
- Increase in gold price recently, an indication of market uncertainty and risk aversion mainly stemming from Brexit.
- OPEC Production Freeze

U.S and China GDP Growth

- Stop-Start affair for US economy- is Quantitative Easing working?
- The US in the first quarter of 2016 recorded a growth rate 0.5%. This was
 the worst performance in two years and was mainly due to a slowdown in
 domestic demand as well as a fall in exports.
- Real economic activity in China remains underwhelming and fragile.
- The biggest concern stemming from China and the US economic developments is that from an Africa perspective, fixed asset investment from China may begin to retract and a US economy failing to recover would have dire consequences for the African continent.

U.S Fed Rates

- Spells danger for financial markets
- Debt raised in US\$ will increase
- Rewards savers, punishes spenders

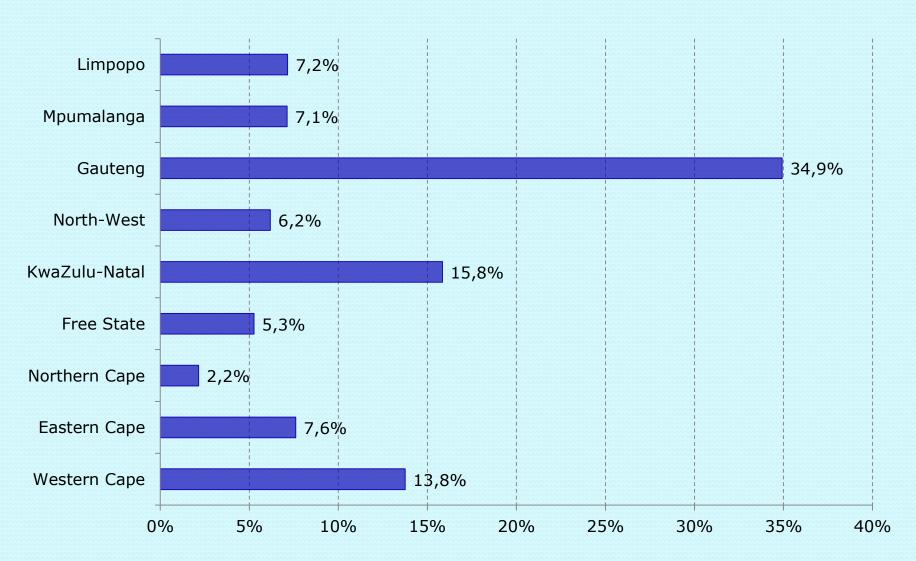

China Total Debt to GDP Ratio

- Total Chinese debt which has exploded higher in the past 10 years
- Previous high economic growth rates in China enabled it to borrow and re-pay its debts, however with lower than normal growth rates in recent times has made it that much more difficult.

Provincial GDP Contribution

 KwaZulu-Natal is second only to Gauteng in terms of percentage contribution to South Africa's GDP

Sector GVA Contribution

 Finance, real estate & business services contributes the most to the provincial GVA, followed closely by the Manufacturing sub-sector.

Sectoral Share (%) of Gross Value Added

SA & KZN Growth Trends in Gross Domestic Product (GDP)

- Financial Crises- Artificial Money through credit kept economy alive (credit Based Consumption)
- Cant consume yourself out of problems.
- GDP growth in the first quarter of 2016 for SA contracted by -1.2% and contracted by -0.3% in KZN, however growth in of 3.3% and 3.0% was experienced in second quarter.
- Sectors in KZN that were negatively affected were;
 - Agriculture (-0.4%), (has contracted for six consecutive quarters)
 - Electricity & Water (-1.4%)
- Contraction in Gross Fixed Capital Formation for last three quarters (contracted by -4.6% in SA).
- KZN has a T-Bone Economy

Exchange Rate

- Rand Depreciation will negatively impact imported goods and services
- Inflation to increase via importation

SA Credit Rating Status

Fitch	S&P	Moody's	Rating grade description		
AAA	AAA	Aaa	Minim	nal Credit Risk

DDD	SD	С	In da	fault, with little	
DD	D			ce of recovery	
D			Chanc	ac of recovery	

Outlook: Probability of a rating change and the likely direction of such a change Stable> no Change Negative>Potential downgrade Positive>Potential upgrade

Fitch = Stable S&P = Negative Moody's = Negative

- Rising Inflation
- Rising Interest rates
- · Low economic growth
- Labour unrest
- High current account deficit
- Rising general government debt
- The potential volatility and cost of external financing

South Africa could lose its spot in Citigroup's World Government Bond Index (WGBI) if its credit rating is downgraded below investment grade.

Sub-Saharan Africa

Economic Contribution to SSA, SA & KZN, 1996-2017*

Rest of Sub-Saharan Africa (SSA):

- Faster Economic Growth Rates
- Stable political and economic environments
- Increased levels of FDI
- Moving towards more secondary and tertiary economic activities
 - Possibility South Africa is no longer viewed as the 'spring board' or 'gateway' into Africa
- Increased Competitiveness
- Exploration and abundance of natural resources
- Consumer Paradise
- Increased trade with other SSA countries

Financial Markets

In the light of the economic challenges presented to South Africa, JSE gives an indication that in many other respects the country is doing fairly well.

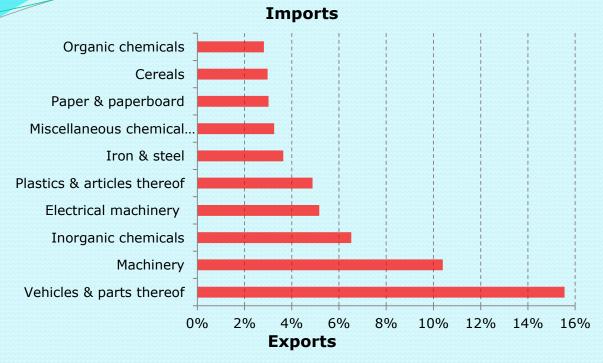

- Disjoint between Economic Growth and stock market performance.
- SA listed Companies looking to invest else where. E.G Sub-Saharan Africa

KZN Trade: Top 10 Import & Export Share by Product

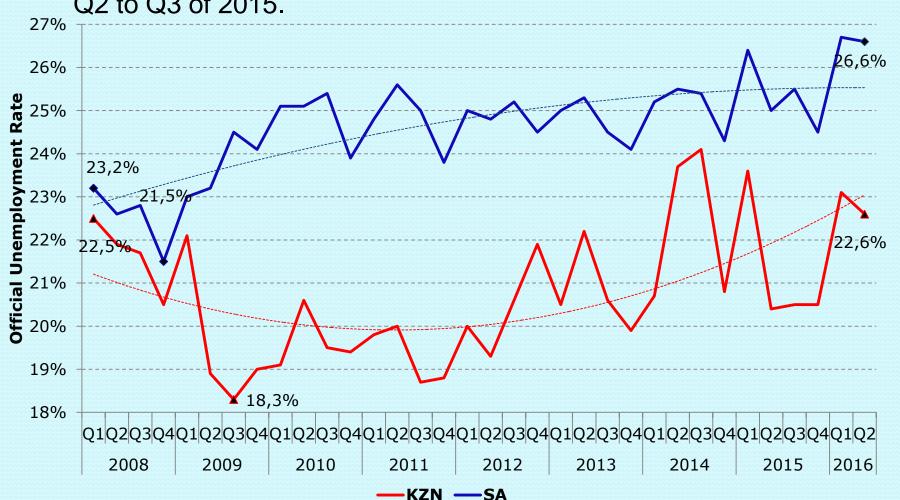

KZN imported goods valued at R118.7 billion in 2015, from R104.7 billion in 2014.

KwaZulu-Natal exported goods valued at R116.9 billion last year, from R111 billion in 2014.

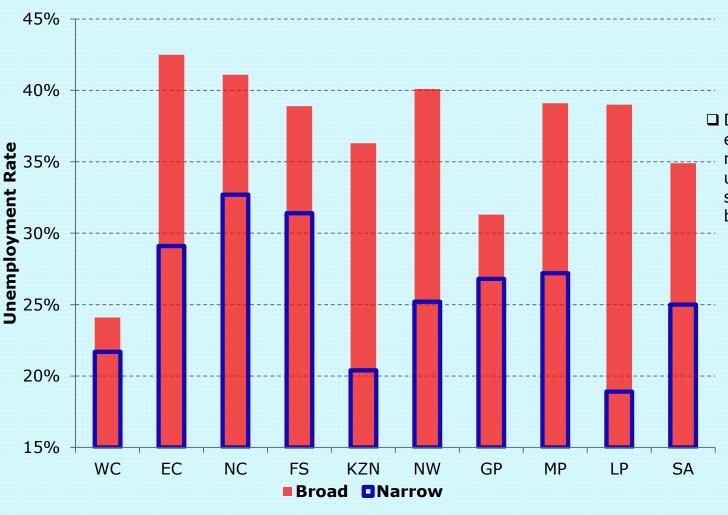

Comparison of unemployment rates between KZN and SA

- The provincial unemployment rate of 20.5% is below the national rate of 25.5 per cent.
- There has been an increase of 0.1% in the unemployment rate from Q2 to Q3 of 2015.

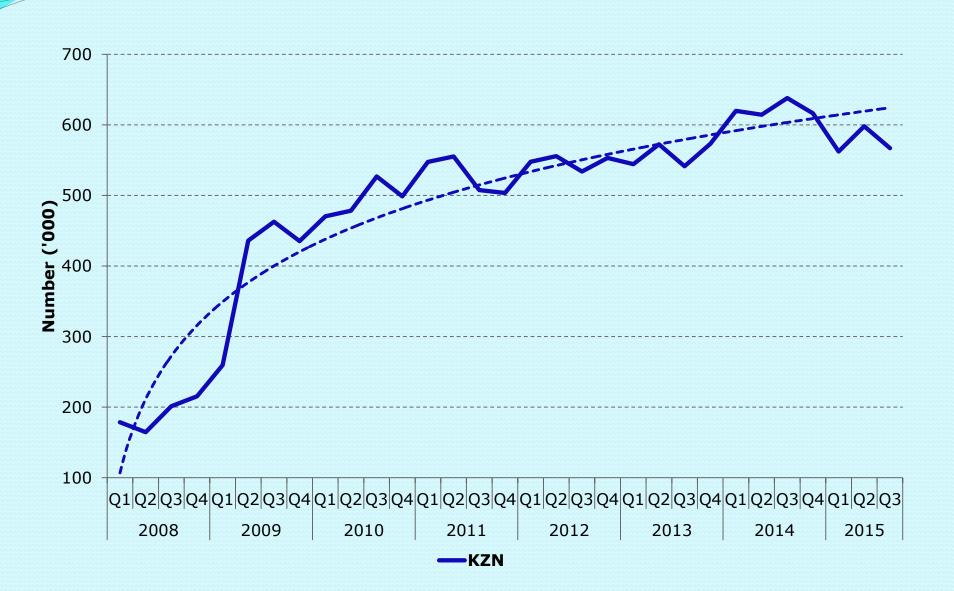

Comparison of unemployment rates

Narrow Vs Expanded Unemployment Rate

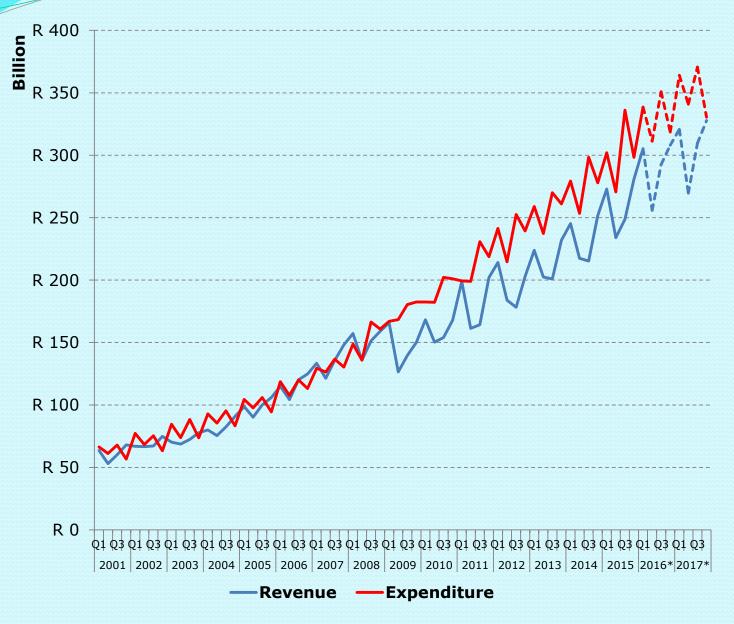

- □ Difference between the expanded and the official, narrow definition, in unemployment shows significant variation between provinces.
 - Least percentage point difference-Western Cape
 - Highest percentage point difference-Limpopo

Discouraged Work Seekers

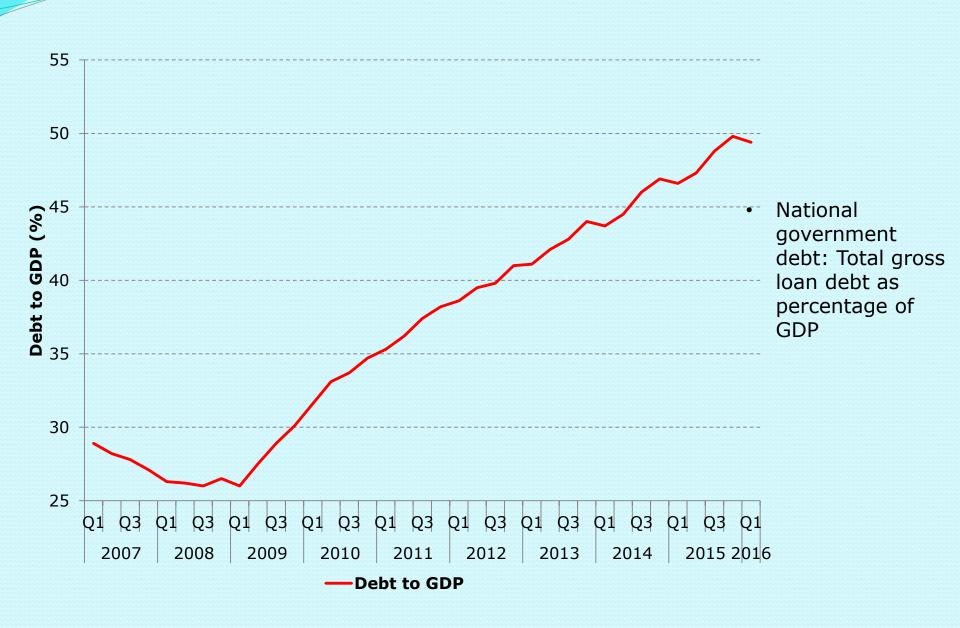

National Budget

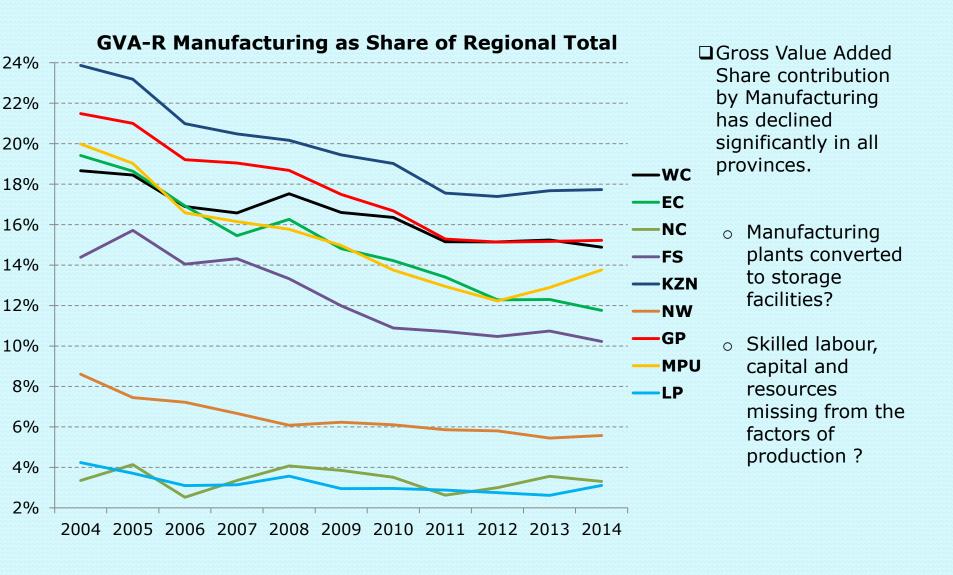

Total National Government Expenditure (current prices) has continued climbing while revenue since the first quarter of 2009, height of impact from global financial crisis on SA, has dropped and followed a trajectory below expenditure

National Budget

Are we becoming a consumption driven, rather than production driven, economy?

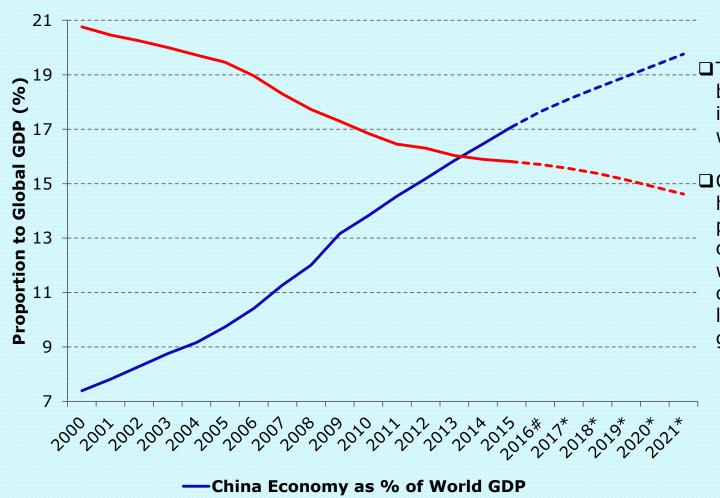

- According to economic strategist Michael Mandel, "The goal of a consumption economy is to provide consumers with low prices and a wide variety, with less concern about jobs and wages. Low prices can presumably bring higher living standards for households, as real wages rise."
- Cheaper prices enable households to spend their money on other goods and services. However, households may not take into consideration that cheaper imported goods do not benefit local production and also create a downside risk of increased unemployment.
- Consumption fuels the economy in the short term, but savings is necessary for capital formation for long term growth.

Productivity Vs Consumption

Share of World GDP, US & China, 2000-2018*

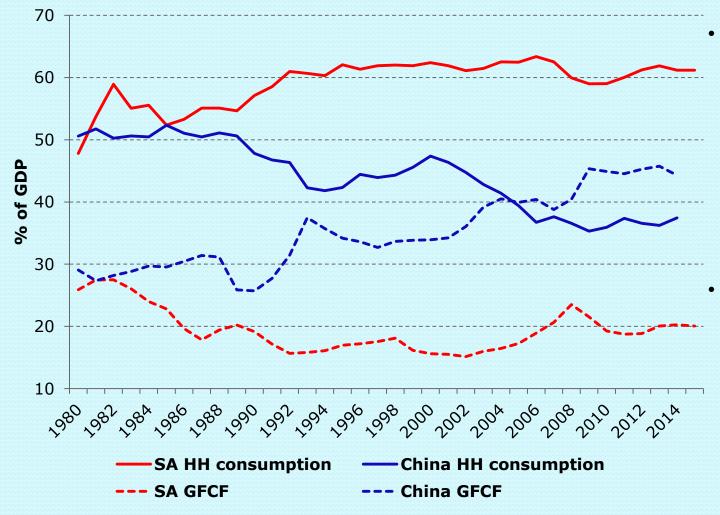

- □ The US economy becoming less influential on total world output.
- □ China on the other hand has increased its proportion of economic output significantly, with China looking to oust the US as the largest economy globally.

—USA Economy as % of World GDP

Two Paths, same starting block?

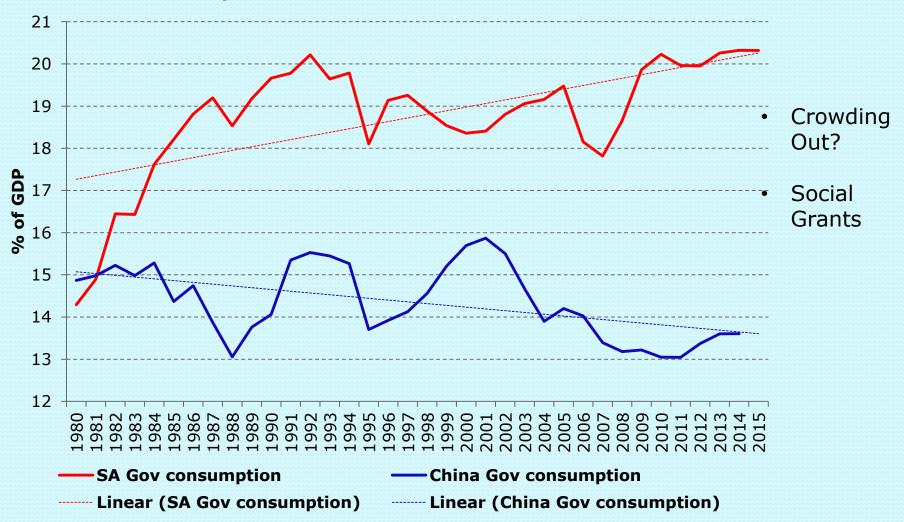

- Household (HH) Consumption
- Gross Fixed Capital Formation (GFCF)
- Government Consumption

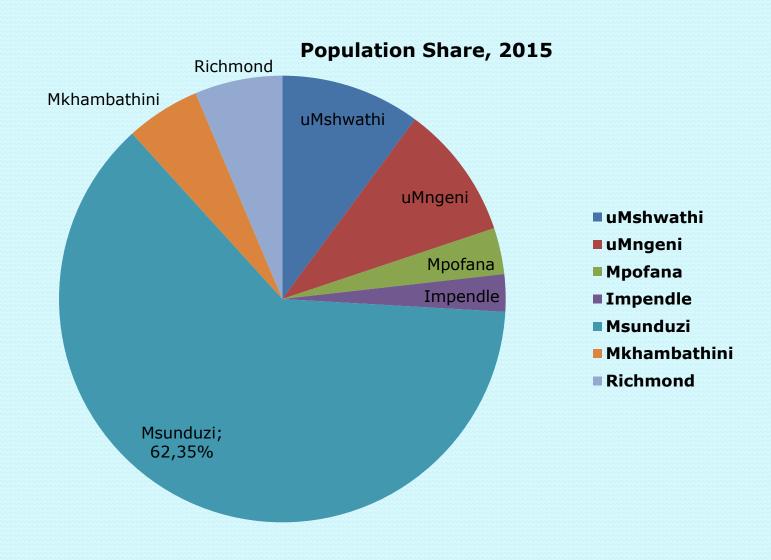

HH Consumption and GFCF as a % of GDP, SA & China, 1980-2013

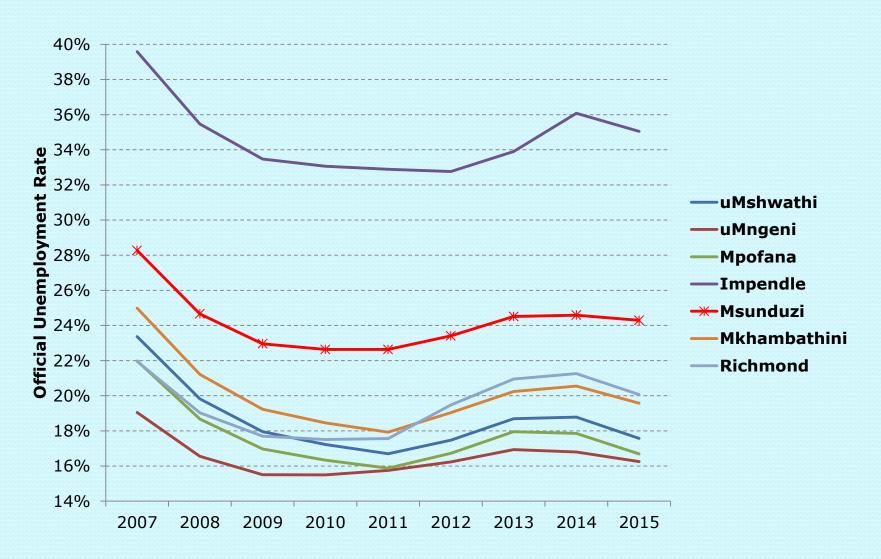

- Similar positions between two nations in the early 1980s in terms of HH consumption and GFCF position relative to their GDP's
- Will the roll out of NDP result in higher GFCF levels?

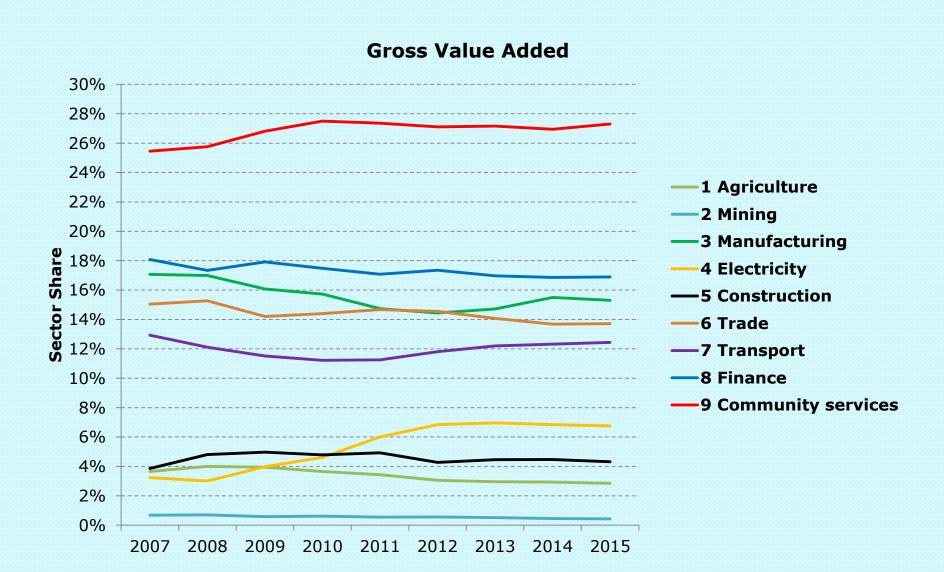

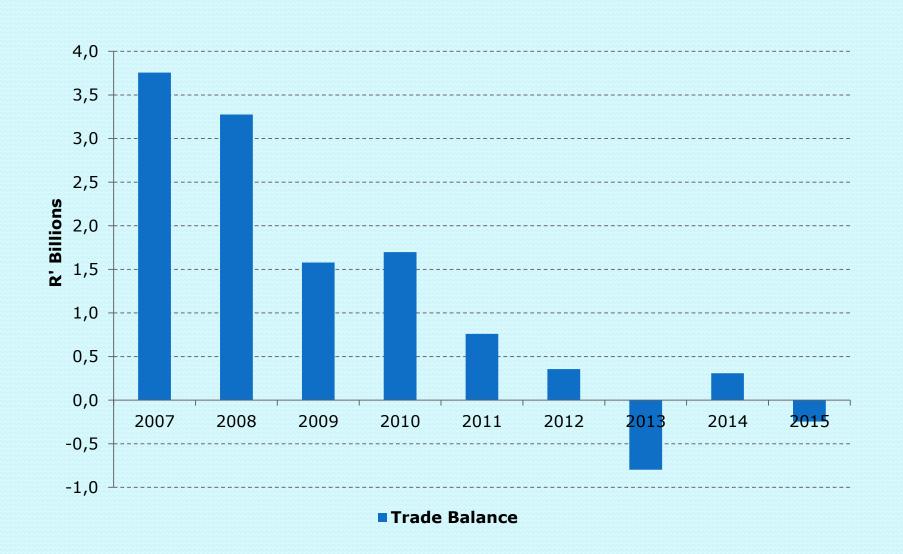

Level of Unemployment above KZN Average
